Author Index to Volume 31

Anderson, W.T., 107

Bodger, P.S., 27

Casti, J.L., 305
Chen, K., 19
Choi, H.S., 347
Coate, M.B., 131

De Greene, K.B., 189
Dietz, T., 79

Franke, R.H., 143

Gander, J.P., 117

Homer, J.B., 197
Honton, E.J., 219
Huss, W.R., 219

Kallis, M.J., 5
Kayello, S., 323
Kirschenbaum, A., 335

Lee, J.C., 61
Linstone, H.A., 1, 301
Lu, K.W., 61

Marchetti, C., 155
Michael, D.N. 107

Nanus, B., 380
Natarajan, R., 257

Onishi, A., 269

Padmanabhan, S., 257
Petroski, H., 323
Pratt, J.H., 49

Sharma, K., 103
Shaw, B.T., 239
Sinan, L., 373
Srinivasa Setty, K.P., 257
Subramanian, S.K., 87, 359

Tay, H.S., 27

Udwadia, F.E., 173
Uri, N., 131

Wenk Jr., E., 377

TECHNOLOGICAL FORECASTING AND SOCIAL CHANGE 31, 385–387 (1987)

Subject Index to Volume 31

Applied mechanics literature, measures and mismeasures of, 323

China, information economy in, 373
Computers,
  introduction and diffusion in the financial industry, 143
Computer aided sales (CAS)
  industrial sales force rebirth, 5
Cross-impact analysis
  scenario analysis, forecasts of future business environments in, 219

Data-Based transformed models
  need for a family of, in technology substitution analysis, 61
Delphi method
  analyzing data from, 79
  for a national energy-conservation policy, 257
Diffusion of technology
  in medical field, 197
  introduction of computers in the financial industry, 143
Disabled persons
  aids for, subsidized technology, 335
Displaced persons
  prevention or mitigation of, problems of, global early warning system for, 269

Electricity
  forecasting consumption, 27
Emergency state
  avoidance of, US/USSR adaptation to turbulent-field environments, 189

Fibonacci search technique, 27
Field theory
  in study of US/USSR adaptation to turbulent-field environments, 189
Financial industry,
  introduction of computers to, 143
Financial resources
  mobilization of, in technology development, 347
Fletcher rule
  development of, pilot study on, knowledge transfer and personnel exchanges/turnovers, 117

Forecasting/forecasts
  Applied mechanics literature, measures and mismeasures of, 323
  business scenarios, alternative methods for developing, 219
  delphi panels, methods for analyzing data from, 79
  dynamics of technological change, shifts in organizational structure, problems facing developing countries, 359
  generation dynamics in computer integrated manufacturing systems, 19
  technological innovation, civilian and military criteria in, 239
  using a family of data-based transformed models, 61
(FUGI) "Future of global interdependence" model
  early warning system for displaced persons, 269
Fundamentalism
  impact on technology and science, 1

Generation dynamics
  Computer integrated manufacturing systems in, 19
Global early warning system
  for displaced persons (GEWS), 269
Global society
  emergence of in post-modern era, probable conflicts, 107
Government funding
  scientific and technological development in Third World, 347

Home-based workforce
  methodological problems in surveying, 49

India
  planning science and technology for national development, 87
Industrial sales
  use of computer in, 5
Information culture
  post-modern global society, development of, need of information and "meta-information" in, 107

Information economy
effects of information technology on, development in China of, 373
Intuitive logics
scenario analysis, forecasts of future business environments in, 219

Knowledge transfers
and research linkages in universities/industry, 117
Korea
scientific and technological development in, financing of, 347

Management systems and manufacturing
increasing need for flexibility in, 359
Manufacturing problems
manufacturing as a system-determined science, 305
Market substitution analysis
future of natural gas, 155
Medical technologies
a diffusion model for, 197
Military
technological innovation in, effects on civilian technologies, 239
Models
data-based transformed, in forecasting technological substitutions, 61
(FUGI) future of global interdependence, early warning system for displaced persons, 269
logistic and energy substitution in forecasting electricity consumption, 27
simultaneous equations, in study of research and development intensity, 131
system dynamics simulation, in medical technologies, 197

National energy-conservation policy
formulation of, 257
Natural gas
future of, 155
New Zealand, electricity forecasting, logistic versus energy substitution models, 27

Patterns of decline
parallels between U.S. and late Roman Empire, 1
Post-modernism,
emergence of global society, conflict of norms in, conflict of paradigms, 107

Research linkages
and knowledge transfers in universities/industry, 117
Roman Empire
similarities to present-day America, 1

Scenario analysis
forecasts of future business environments in, 219
Science and technology
importance of in national development, 87
Simultaneous equations model
in study of research and development intensity, 131
Space exploration
international cooperation in, economic risks of, 173
Subsidized technology
aids for the disabled, 335
System-determined science
manufacturing as a, 305
System dynamics simulation model
involving medical technologies, 197

Technological innovations
a civilian-military theory of, 239
dynamics of, shifts in socioeconomic environment, 359
mobilization of financial resources for, 347
Technology
subsidization of, social uses of, aids for the disabled, 335
Technology substitution analysis
using a family of data-based transformed models, 61
Third world
problems facing, technology, productivity and organization, 359
scientific and technological development in financing of, 347
Trend-impact analysis
scenario analysis, forecasts of future business environments in, 219
Turbulent-field environments
US-USSR adaptation to, avoidance of emergency state, 189

US/USSR
adaptation to turbulent-field environments, avoidance of emergency state, 189

Book Review Index–Volume 31

Boulding, K., *Human Betterment* (Burt Nanus), 380

de Mesquita, B., Newman, D. and Rabushka, A., *Forecasting Political Events: The Future of Hong Kong* (Kish Sharma), 103

Dermer, J. (ed.), *Competitiveness Through Technology—What Business Needs from Government* (Edward Wenk, Jr.), 377

Tomlinson, R. and Kiss, I. (eds.), *Rethinking the Process of Operational Research and Systems Analysis* (Harold Linstone), 301
